

Healthcare – Biometrics Support

****Opener (Human + Relatable)****

Hi, this is Sarah from Spark AI. Hospitals often say staff spend hours entering biometric and test data. Does that sound familiar?

****Diagnostic Question****

How many hours per week are spent on biometric data entry?

****Solution + ROI Pitch****

We run a 90-minute AI Accelerator where we show teams how to automate these workflows. That usually saves 200+ staff hours within two months and cuts process times by 40–50%. If it doesn't, we refund the fee.

****Proof Point****

One hospital reduced data entry workload by 50% by automating intake forms.

****Close****

Would you be open to mapping your top 2–3 workflows on a short Zoom? I can do Tuesday morning or Wednesday afternoon — which works better for you?

****Objection Handling****

If prospect says 'Email me': "Of course. Just so I send the right info, which part of this process slows you down the most?"

If prospect says 'No budget': "Totally understand. Most clients cover the workshop from the first workflow we automate. If we don't find savings, you keep the roadmap free."
